

A Big Shout Out to Carter Randolph for his recent inquiry on **How to Clean Your CLS iPad!**

Great IT question, Carter! I'm sure a lot of people out there have been wondering the same thing. Here are some suggestions for all you iPad users!

The best practice is to keep your hands clean while using your device. For instance, eating Cheetos, fried chicken or pepperoni pizza while doing your homework makes for a messy iPad!

First, grab a clean, soft, dry, lint-free cloth or dry microfiber cloth. If you wear glasses, you probably got one from the Optometrist! Don't use paper towels, napkins, etc... Paper scratches.

Have a stubborn spot? Turn off your iPad just to be safe. Then you can *lightly* dampen the cloth with a bit of plain water or 70% isopropyl alcohol. Again be *very careful* to keep moisture out of any openings and always wipe the iPad down with a clean, dry cloth afterwards (not that pizza smeared napkin!).

Here are the DO NOT's:

Do not use window cleaners, household cleaners, solvents, alcohol or ammonia products.

Do not use aerosol sprays, bleaches, or abrasives.

Do not spray any cleaning products or liquids directly onto or into the iPad.

Do not leave the device plugged in or turned on while cleaning.

Do not use abrasive cloths like paper towels.

If *you* have a technology question, feel free to ask! Technology is Teamwork!

"Alone we can do so little; together we can do so much." – Helen Keller
